

NCPP

Nickel Cadmium Pocket Plate Batteries

Block Battery Catalogue

Introduction:

HBL's Nickel Cadmium Pocket Plate battery designs are based on the superior pocket plate technology.

A fully integrated modern factory, supported by strong process management and quality controls makes HBL one of the best Nickel Cadmium battery production facilities in the world.

HBL's block batteries are offered in multiple voltage choices and in wide capacity range.

NCPP block battery range is designed to comply with IS 10918 & IEC 60623.

Construction

The internal mechanical structure is made of nickel plated steel making it highly rugged and capable of withstanding mechanical abuses. The active materials are encapsulated between specially designed folded steel strips, which are perforated on both sides. This design increases the effective surface area by 30% which in turn results in effective utilization of active material and makes the battery more efficient.

Block batteries use special polypropylene separator system, which is chemically inert and highly immune to wear and tear. Batteries come in tough, shock resistant, fusion welded polypropylene containers and lids. A unique flame arresting flip type vent cap in the batteries prevents any unusual event and electrolyte contamination.

Block batteries are supplied either in filled condition (charged or discharged) or dry & discharged condition with inter-cell connectors, cable connectors, associated hardware and accessories that are required for normal operation and maintenance. Powder coated Mild Steel racks to house the batteries can be provided as an option.

Cut-view of cell:

Benefits

- ❖ High reliability
- ❖ Long float life - 20 years+ at 20° C for standby applications
- ❖ Long shelf life - 5 years+ for the cells supplied in dry condition & 1 year in filled condition
- ❖ Quick charging - More than 90 % capacity available within 6 hours of charging
- ❖ Low internal resistance - For enhanced battery performance
- ❖ Resistant to mechanical & electrical abuses - Making it ideal for deployment in harsh environments
- ❖ Wide operating temperature range (-20° C to +50° C)
- ❖ Application specific designs (KBH, KBM & KBL)
- ❖ Easy installation & low maintenance
- ❖ Best TCO (Total Cost of Ownership) for demanding application needs
- ❖ No risk of sudden death failure

Capacity Range

High Discharge - KBH:

- ❖ Thin plates with more plate surface area
- ❖ For high discharge applications with less than 1 hour backup time requirements
- ❖ 9 Ah to 990 Ah
- ❖ 77 standard cell models to choose from

Medium Discharge - KBM:

- ❖ Optimized plate thickness
- ❖ For medium discharge applications, between 1 to 3 hours backup time requirements which involves high and long discharges
- ❖ 12 Ah to 1460 Ah
- ❖ 72 standard cell models to choose from

Long Discharge - KBL:

- ❖ Thick plates with more amount of active material
- ❖ For long discharge applications, with more than 3 hours backup time requirements
- ❖ 8 Ah to 1680 Ah
- ❖ 73 standard cell models to choose from

Applications

Block battery range is specially designed for industrial markets considering the reliability, cost-optimization and low-maintenance requirements for the following applications and segments

- ❖ Fire alarm systems
- ❖ Signaling and Telecommunications
- ❖ Solar Photovoltaic
- ❖ Instrumentation & Process control
- ❖ Switchgear protection
- ❖ Emergency lighting
- ❖ Switchyard
- ❖ UPS
- ❖ Genset starting
- ❖ Diesel Locomotive cranking
- ❖ Electromagnetic lifters (EOT crane)

Battery Charging

Following are recommended charge conditions:

Commissioning Charge:

- ❖ Constant current charge of 10 hours at $0.2 C_5$ A (20 amps for 100 Ah battery)

Quick Charging:

- ❖ Constant current charge at $0.4 C_5$ A for first 2.5 hours followed by $0.2 C_5$ A for next 2.5 hours

Charging in Operation:

The recommended charging voltages for continuous parallel operation, with occasional battery discharges:

Two Level Charging:

- ❖ Float level:
 - 1.40 V/cell for KBH & KBM
 - 1.42 V/cell for KBL
 - Float charging current: 1 to 2 mA per Ah
- ❖ *Boost level:
 - 1.45 to 1.70 V/cell for KBH & KBM
 - 1.47 to 1.70 V/cell for KBL
 - Current limit: $0.2C_5$ A

Single Level Charging:

- ❖ 1.43 – 1.50 V/cell
(may increase water consumption)

* Refer charge curves at page#63

(A higher voltage will keep the battery at high state of charge)

(All dimensions in mm. Height is including cells)

Evaluation of Rack Length

Length of Rack = (X + 5) x No. of block cells in a row (for all block cells)

Where X = Length of cell / block cell for length-wise mounting (KBH 9-118 / KBM 12-390 / KBL 8-460)

= Width of cell / block cell for cross-wise mounting (KBH 127 & above / KBM 400 & above / KBL 480 & above)

The value of length should be rounded-off to nearest to 100 mm and 5 mm should be added to arrive at the final length of rack.

Standard Arrangement of Cells

Following standard arrangement and connection methods of cells are recommended by HBL for optimum efficiency. These configuration methods shall be followed for the cells being installed on racks, cabinets, crates or simply freestanding battery cells.

ARRANGEMENT	KBH	KBM	KBL
